### EXAMINER'S AMENDMENT

1. Examiner notes for the record with gratitude Mr. Chen's professional presentation and prompt attention in handling this application.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
3. Authorization for this examiner's amendment was given in a telephone interview with Nicolas Chen on 8/31-2005 - 9/8/2005.
4. The application has been amended as follows:

#### In the Claims:

- Claim 1 has been amended to delete lines 3-9 completely and insert in their place:  
---passage of a shank of the bolt in an axial direction, the attachment clip comprising:  
a clip body having an abutting part for abutment against the first member, the clip body having a shank hole for passage of the shank of the bolt and an outer flange formed at an outer periphery of the clip body, wherein the abutting part is formed with an abutting line extending parallel to the outer circumferential edge of the outer flange and extending away from the clip body in the axial direction, and the clip body is apart from the outer flange for a predetermined distance extending away from the clip body in the axial direction, thereby providing the clip body and the outer flange with a step-shaped section; and---
- Claim 1 line 13 has been amended to delete "an axial" and insert in its place --the

- Claim 1 line 13 has been amended to delete "chip" and insert in its place --clip--.
- Claim 1 line 16 has been amended to delete "an axial" and insert in its place --the axial--.
- Claim 1 line 20 has been amended to delete "in a direction of the height of the attachment clip" and insert in its place -- extending away from the clip body in the axial direction--.
- Claim 7, line 2 has been amended to insert --- in an axial direction-- immediately after "passage of a shank of the bolt".
- Claim 7 line 6 has been amended to delete "on the first" and insert in its place --against the first--.
- Claim 7 line 8 has been amended to delete "along an outer" and insert in its place --at an outer--.
- Claim 7 has been amended to delete lines 8-11 from "wherein the abutting part...section and a plurality of" completely and insert in their place:  
-- wherein the abutting part is formed with an abutting line extending parallel to the outer circumferential edge of the outer flange and extending away from the clip body in the axial direction, and the clip body is apart from the outer flange for a predetermined distance extending away from the clip body in the axial direction, thereby providing the clip body and the outer flange with a step-shaped section; and a plurality of---
  - Claim 7 line 14 has been amended to delete "along an " and insert in its place -- along the-- .

- Claim 7 line 15 has been amended to delete "chip" and insert in its place --clip--.
- Claim 7 line 19 has been amended to delete "an axial" and insert in its place --the axial--.
- Claim 7 line 23 has been amended to delete "in a direction of the height of the attachment clip" and insert in its place -- extending away from the clip body in the axial direction--.

5. The following is an examiner's **statement of reasons for allowance**: Fisher USP 4911594 and/or Fisher in view of Frederick USP 3203302, as applied in the last office action, teach all the claim limitations except a clip body having an abutting part formed at an outer periphery of the clip body, said part having an abutting line extending parallel to the outer circumferential edge of the outer flange and extending away from the clip body in the axial direction, and the clip body is apart from the outer flange for a predetermined distance extending away from the clip body in the axial direction, thereby providing the clip body and the outer flange with a step-shaped section. With this additional structural limitation in the independent claims, all the claims read over the prior art of record. Examiner notes that the claws are described as "departing from the clip body along the axial direction of the attachment clip", and the clip body includes the outer flange, and thus the claws must necessarily extend in the axial direction opposite from the axial direction that the flange extends. Also note the only relevant definition of a step in terms of "step-shaped" requires the shape of a step of a stairway.
